

ANKIT SINGH RATHI

DevOps Engineer | AWS Solutions Architect Professional Certified |
ankitrathi.info | CKA | CKAD | Ex Walmart SE

+971-585569492 @codeaprendiz@gmail.com www.ankitrathi.info Dubai

EXPERIENCE

Senior Platform Engineer / Software Engineer 3 09/2022 - Ongoing

Banque Saudi Fransi

Dubai

- Setting up **self-hosted** mac os github runners on mac studios for IOS builds which **reduced** the build time of the apps by **75%** (1 hour to 15 mins).
- Created CI-CD workflow on **github actions** for automated kubernetes manifests **linting** and deployment using **kubescape**, **kubeval** and **kustomize**
- SAML** implementation to create users for **Sonarqube** using Oracle **IDCS**.

DevOps Engineer

01/2020 - 08/2022

Tradeling.com

Dubai, UAE

- Set up Infrastructure on **self-managed kubernetes** cluster from scratch on AWS using **ansible**, **terraform** and poseidon/typhoon. Generated k8s manifests using **php**.
- Migrate all backend APIs to **AWS Edge Optimized API Gateway** and **EKS**. Also used AWS **WAF**, **API Throttling**, **API Caching**, **Network LB** and **VPC Link**
- Caching APIs at **AWS Cloudfront** with dynamic origins thereby reducing the homepage response time by **75%** (105ms to 25ms). Also used custom **CORS** and caching policies.
- Reduced the **avg** website **load time** in China by **80%** (2500ms to 500ms) by testing with **Zenlayer Global Accelerator**, **Huawei CloudConnect**, **Alibaba Global Accelerator**, **Geolocation Records** and reduced the cost of solution from 3500\$ to 70\$ i.e. **98%**
- Closed around 70 plus vulnerabilities reported in ASV, Network VAPT, Web Application PT to make the infrastructure **PCI compliant Level 1**
- Set up **Monitoring** for Tradeling Infrastructure from scratch using **ELK stack**, **metricbeat**, **journalbeat** and **ansible** which collects data from 50+ servers across 3 environments
- Set up **CI-CD** on **GitHub Actions** and **Docker Jenkins** using ansible running **15000** jobs daily. Maintained jenkins jobs using groovy scripts
- Created Monitoring **Dashboards** in **Kibana** for API Performance, MongoDB, NATS, MySQL, Kubernetes, Hosts, System Monitoring and Docker.
- Reduced the **avg** website **load time** in China by **80%** (2500ms to 500ms) by testing with **Zenlayer Global Accelerator**, **Huawei CloudConnect**, **Alibaba Global Accelerator**, **Geolocation Records** and reduced the cost of solution from 3500\$ to 70\$ i.e. **98%**
- Daily Automated Releases using **python** script (**2000+ lines of code**) sending **automated email change log** of **50+ repositories** to respective teams. Attend **stand-ups** and **sprint planning** sessions.
- Maintaining Self Managed Databases including **MySQL**, **MongoDB** using docker-compose
- Daily backups** of MongoDB, MySQL using ansible being uploaded to AWS S3 buckets
- 24/7 automated website monitoring using **Prometheus**, alertmanager, blackbox exporter with automated slack alerts.

DevOps Engineer

11/2018 - 01/2020

Accelya Group

Dubai, UAE

- Setting up Infrastructure of the new customers for Development, UAT and Production Environments on **Weblogic** and **Tomcat** Platforms.
- Migration** of the build-jobs of **66 customers** to separate the 'Builds & Deployments' phases.
- Build **JIRA Dashboard** for the team. This was extensively used by all teams to log tickets and follow the DevOps Approach

Software Engineer

01/2017 - 10/2018

Walmart Labs

Bangalore, India

- Set up Infrastructure for **microservices** on **OneOps** with **DR** enabled involving **1000s** of servers across two data centers.
- Created DevOps Automation **Dashboard** using **Django**, **Python** to automate **splunk** alert actions.

CERTIFICATIONS

PROJECTS

API Caching At AWS Cloudfront

By caching the GET APIs at AWS Cloudfront we were able to **reduce** the **response** time by **75%** (**105ms to 25ms**)

- Created **dynamic origins** with **custom caching** and **custom CORS** policy
- Were able to achieve **single digit millisecond latency** for some GET APIs endpoints

SKILLS

Infrastructure As Code Tools

Ansible · Terraform · Cloud Formation

Cloud Providers

AWS · GCP · Alibaba · Huawei

Container And Orchestration

Docker · DockerSwarm · Kubernetes · ECS · Fargate

Languages

python · go · shell · nodejs · php

Version Control Systems

Git · SVN · Code Commit

Ingress Controllers

Traefik · Istio · Kong · Nginx

Monitoring

Grafana · Prometheus · Elastic Search · Kibana · Logstash · Splunk · Datadog · Journalbeat · Metricbeat · Alertmanager · Blackbox Exporter · Cloudwatch

Web Servers

Tomcat · Apache · Nginx · Jboss

OS

Fedora CoreOS · Linux · Windows

Build Configuration

Maven · npm

PROJECTS

Re-Architecting Backend APIs with AWS API Gateway

We improved the **security** and **performance** of all the backend APIs by using Edge Optimized AWS **REST API gateway**.

- Applied AWS **WAF** at AWS API Gateway to improve the security of APIs.
- Also used API **throttling**, API keys and custom domain names.
- Used **Edge Optimized** REST API gateway to improve performance by using caching features
- Other AWS Services used : **Network Load Balancer**, **EKS** and **VPC Links**

Architect Cloud Infrastructure for China - Multi Cloud

We improved the website performance in China by **reducing** the avg website **load time by 80%** (2500ms to 500ms). This project was multi-cloud and was implemented in 3 phases.

- We initially used **Alibaba Global Accelerator** and **geolocation** records. Cost of the project was around **\$3500** per month. We purchased dedicated bandwidth from HongKong to India.
- We then used **Huawei Cloud Connect**, **SNAT**, **DNAT**, **NLB**, geolocation records. The cost was around **\$1500** per month.
- Finally we used **Zenlayer Global Accelerator** with geolocation records. This had the least cost of **\$100** per month. This was based on data-transfer per month.

Migrating Self Hosted Services to AWS Managed Services

- MySQL was migrated to AWS RDS MySQL
- MongoDB was migrated to MongoDB Atlas
- Elasticsearch was migrated AWS ElasticSearch
- Self managed kubernetes cluster using kops was migrated to EKS

Monitoring And Logging Setup Using ELK Stack

Tradeling Monitoring and Logging Setup from scratch to set up dashboards

- **ELK** i.e. Elastic Search, Logstash and Kibana was used. All were set up on individual instances using **docker-compose** and **ansible playbooks**
- **Journalbeat** was used to set up logging for kubernetes. **Metricbeat** was used for getting metrics of kubernetes, instances, mongodb, mysql and NATs.
- **Dashboards** set up for Kubernetes, System, Host, MongoDB, MySQL, NATs, Docker monitoring. **URL monitoring** and **Alerts** on slacks using Prometheus, Alertmanager, Blackbox-Exporter
- **Prometheus**, **Alertmanager**, **Blackbox-exporter** set up done using ansible, docker-compose

Self Managed kubernetes infrastructure using opensource Typhoon

- Created using AWS, Terraform and OpenSource poseidon/typhoon repository.Used **reserved** and **spot** Instances to **save cost**
- The cluster was **self healing**. Whenever spot instance was terminated, **lamda** function would trigger a **webhook** in Jenkins which would run **ansible playbook task** to **drain** the corresponding kubernetes cluster node.

Automated Releases to Staging and Production

- **Python** script with **2000+** lines of code and triggered via **ansible-task** to automate release to staging environment which was in turn triggered through Jenkins
- **Automated Change Log-Email** sent to the dedicated audience after the release
- **Live Updates** of the release on **Slack Channel** showing status of builds and deployments

Infrastructure setup using Terraform, Ansible

- Setting up 3 environments - **Prod**, Stage, Dev
- Each environment consisting of **VPCs**, **EC2**, **Route53** records, **Route** tables, **Security** Groups, **Bastion** hosts, **NAT** Gateways etc
- Planning regular **upgrades** of self managed services like **MongoDB**, **MySQL**, **NATs**

Payment Card Industry Data Security Standards (PCI-DSS) Compliance - L1

Tradeling Infrastructure was made **PCI-DSS complaint L1** by closing ~70 vulnerabilities across different scans : **ASV**, **Network VAPT** and Web Application **Penetration** Testing.

- Used AWS **KMS** to encrypt card holders data before it was saved to the database.
- Provided necessary documentation and closed all the gaps that were high-lighted.

Self Hosted Github Mac OS Runners

Set up builds for IOS apps on self hosted mac os studios

- Setting up self-hosted mac os github runners on mac studios for the IOS builds which reduced the build time of the apps by **75% (1 hour to 15 mins)**.
- The github minutes usage was reduced from **480 mins to 0 (480% improvement)** for every IOS build.

SKILLS

CI-CD

Github Actions · Jenkins · Code Build ·

Code Deploy · Drone-Cl

Databases

MySQL · PostgreSQL · MongoDB · Oracle-SQL

EDUCATION

B.E. Computer Science and Engineering

Bangalore Institute Of Technology

07/2013 - 07/2017

Bangalore, India

GPA | **75** / 100

ACHIEVEMENTS

AWS Certified Solutions Architect - Professional

It took me around 290 hours spread across 4 months to prepare for the examination outside office hours.

Daily Automated Releases to Stage And Weekly to Prod

It took a lot of **sleepless** nights to develop **2000+ lines** of **python** code which sends live slack alerts for build status and deployment status, calculates the change log of **50+ repositories** and send automated email to required audience
